Jatesh Kumar

Senior iOS Engineer | Deputy Manager (Team Lead)

Karachi, Pakistan | Available across all time zones
jateshkumarmaheshwari@gmail.com | +92-333-0275759 | linkedin.com/in/jkmaheshwari

Senior iOS Engineer with 5+ years building native iOS and macOS apps serving 100K+ users. Architected MVVM-based modular systems and led stability work that raised crash-free users from 87% to 96%. Drove adoption of Swift Concurrency, feature flags, and CI/CD, and cut Google Maps API spend from $27K to $3K/month. Currently leading a team of 5 engineers on AI/ML Automation and internal tooling, with hands-on work in Flutter and React Native integrations. Open to fully remote roles.

Experience

Deputy Manager, AI/ML Automation
Sep 2026 - Present

Ideas Private Limited

- Leading a team of 5 engineers building organization-wide tools across multiple platforms, setting technical direction, decision making and reviewing work.
- Implemented native iOS CallKit integration in Swift for a React Native app, enabling incoming-call UI on the lock screen.
- Building an internal prompt library app in Flutter for organization-wide use, giving teams a shared, searchable collection of vetted AI prompts.
- Adopting AI-assisted development workflows across the team, using tools such as Claude Code to accelerate feature delivery and MVPs.

Senior Engineer - iOS/macOS
Mar 2023 - Sep 2026

PureSquare - Disrupt.com

- Redesigned Dark Web Monitoring journeys across iOS and macOS by simplifying UI flows and reducing breach resolution steps, and implemented a Password Manager freemium feature, driving higher user retention and recurring purchases.
- Implemented a CI/CD pipeline using Fastlane and Azure DevOps for iOS and macOS, automating TestFlight uploads for iOS and end-to-end macOS builds including archiving, PKG generation, and notarization.
- Championed adoption of TDD practices across iOS and macOS codebases, increasing test coverage by 20%.
- Led stability improvements by resolving retain cycles and memory leaks, significantly enhancing production reliability.
- Integrated SwiftUI with UIKit-based architecture for new modules, enabling modular UI development, better state management, and enhanced UX consistency.
- Refactored legacy completion-handler–based networking to Swift Concurrency (async/await), reducing callback nesting and improving maintainability and execution efficiency.
- Designed and implemented a feature flag system enabling controlled rollouts, A/B testing, and remote feature toggling without app releases.
- Led technical planning and architectural decision-making during sprint cycles, planning, backlog grooming, ensuring scalable design and timely feature delivery.

iOS Engineer
Feb 2021 - Mar 2023

Next Generation Innovation (NextGenI)

- Owned the iOS app for Zofeur, an early-stage product, taking it from concept to App Store release and driving technical decisions, feature development, and core architecture.
- Designed and implemented the core maps layer using Google Maps SDK and Core Location, including driver and user tracking, geofencing, and map-driven flows.
- Implemented polylines and custom overlays to visualize trip routes, driver approach, and live trip progress.
- Redesigned Google Maps API integration with intelligent caching, request throttling, and usage optimization, cutting monthly infrastructure costs by roughly 89%.

- Worked closely with designers and product to iterate on map UX, motion, and transitions, rapidly testing and refining new mapping experiences.
- Designed a scalable MVVM-based modular architecture with reusable feature components that became the standard across multiple iOS projects within the organization, improving scalability and reducing setup time.
- Onboarded and trained a new team member while contributing to Zofeur and two additional applications, improving delivery velocity and code quality.
- Optimized app bundle size by eliminating unused resources, redundant modules, and dead code, improving install experience and reducing App Store package size by 18%.

Education

Mehran University of Engineering and Technology, Jamshoro

2016-2019

- Bachelor of Engineering, Computer Systems Engineering
- GPA: 3.70

Skills

- Languages: Swift, Objective-C
- Frameworks: UIKit, SwiftUI, Core Data, Core Animation, Core Location, AVFoundation, StoreKit, Combine, MapKit, WidgetKit
- macOS: AppKit, Notarization, PKG Packaging, Code Signing, Gatekeeper, Instruments
- Networking & Data: URLSession, Alamofire, Codable, Firebase, RESTful APIs
- Architecture & Concurrency: Swift Concurrency (async/await, Actors), Grand Central Dispatch (GCD), OperationQueue, MVVM / Clean Architecture, Dependency Injection
- Performance & System-Level: Memory Management (ARC), App Lifecycle Management, Background Tasks, Push Notifications, Instruments (Leaks, Allocations, Time Profiler)
- Payments: StoreKit, Apple Pay, Stripe, AWS payment gateway integration
- Security: Keychain, SSL/certificate pinning, code signing (certificates, provisioning profiles, APNs certificates)
- Testing & Quality: XCTest, TDD
- DevOps & CI/CD: Fastlane, GitHub Actions, Azure DevOps
- Tools: Git, Firebase Crashlytics, Xcode Debugger, CocoaPods, SPM, Jira
- Methodologies: Agile / Scrum
- AI-Assisted Development: Claude Code, Cursor, prompt engineering, prompt library design
